

A tropical island with palm trees and a white sandy beach, surrounded by clear blue water. The sky is a pale blue with some light clouds. The water in the foreground is a vibrant turquoise color with gentle ripples.

APEC CLIMATE SYMPOSIUM 2018
21-23 August 2018
Port Moresby, Papua New Guinea

APEC CLIMATE SYMPOSIUM

August 21-23 August 18

Port Moresby, Papua New Guinea

- **Prof Chalapan Kaluwin**
- **University of Papua New Guinea**

Presentation

- **Introduction**
- **Science of Climate Change
Variability and Sea level Rise**
- **Risks and Management
Approaches**
- **Conclusion**

Sun

Jupiter

Earth

Pluto

Which planet is the warmest?

Answer to the exercise

Planets and atmospheres

Mars

Thin atmosphere
(Almost all CO₂ in ground)
Average temperature : - 50°C

Earth

0,03% of CO₂ in the atmosphere
Average temperature : + 15°C

Venus

Thick atmosphere
containing 96% of CO₂
Average temperature : + 420°C

The earth is warming!!!-

**The Greatest
challenge to Man-kind**

A photograph of Donald Trump sitting at a desk, holding a white sign with black text. The sign is divided into two sections by a diagonal line. The top section contains the text 'FUCK THE PLANET' in bold, capital letters. The bottom section contains the handwritten text 'I'll be dead soon anyway.' followed by a signature that appears to be 'Donald Trump'.

FUCK
THE
PLANET

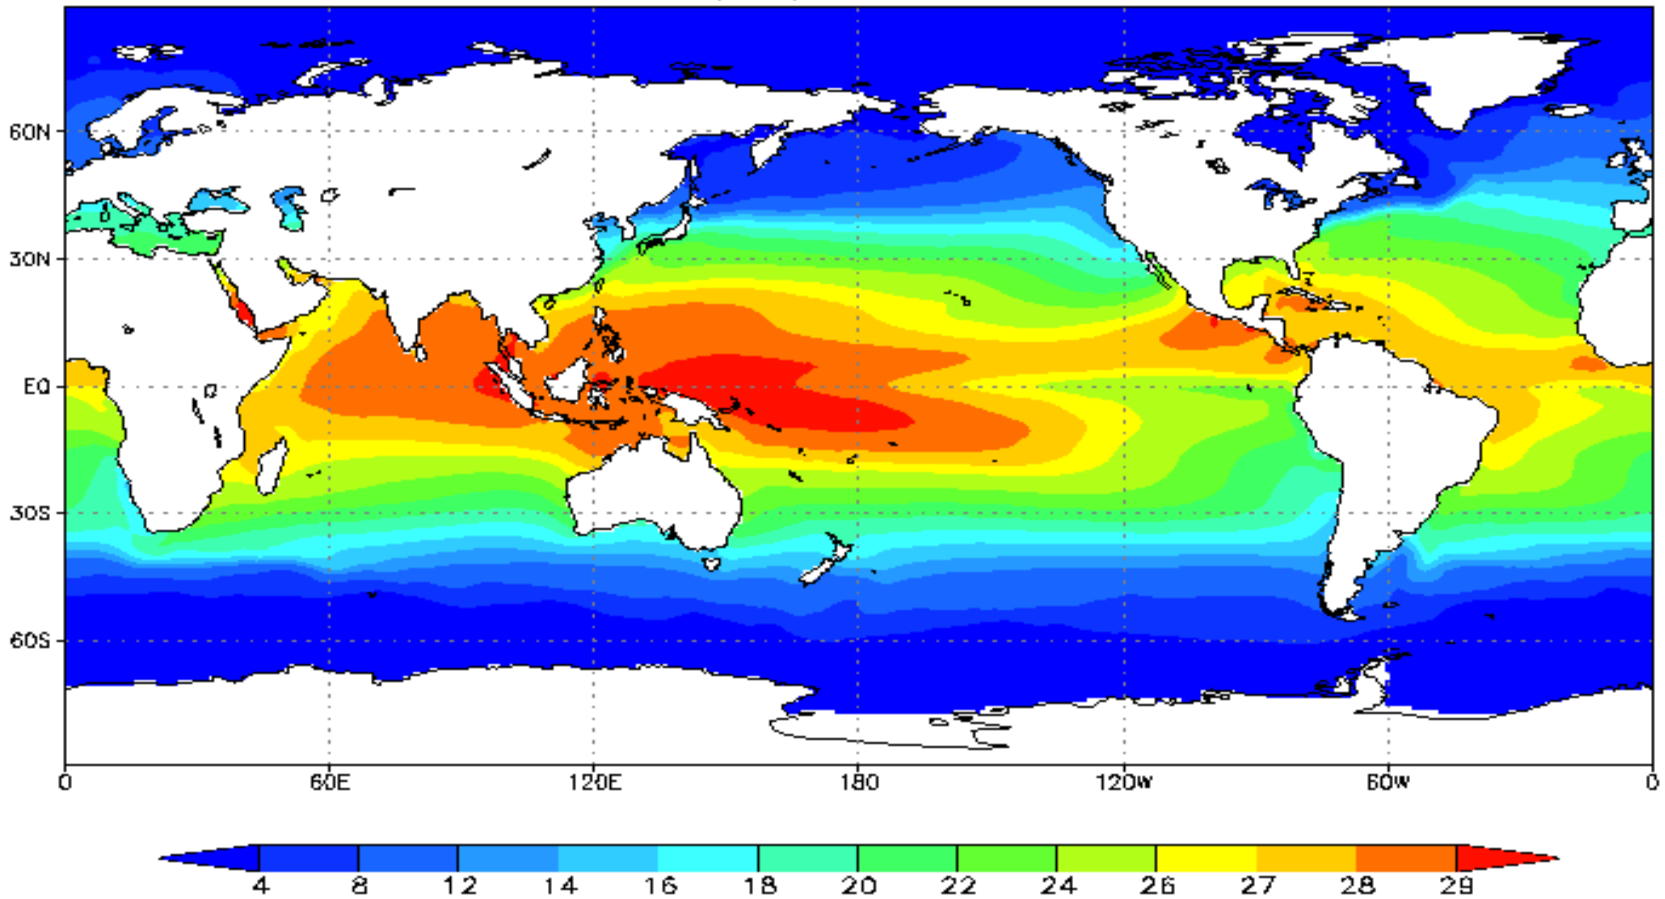

*I'll be dead
soon anyway.*

Donald Trump

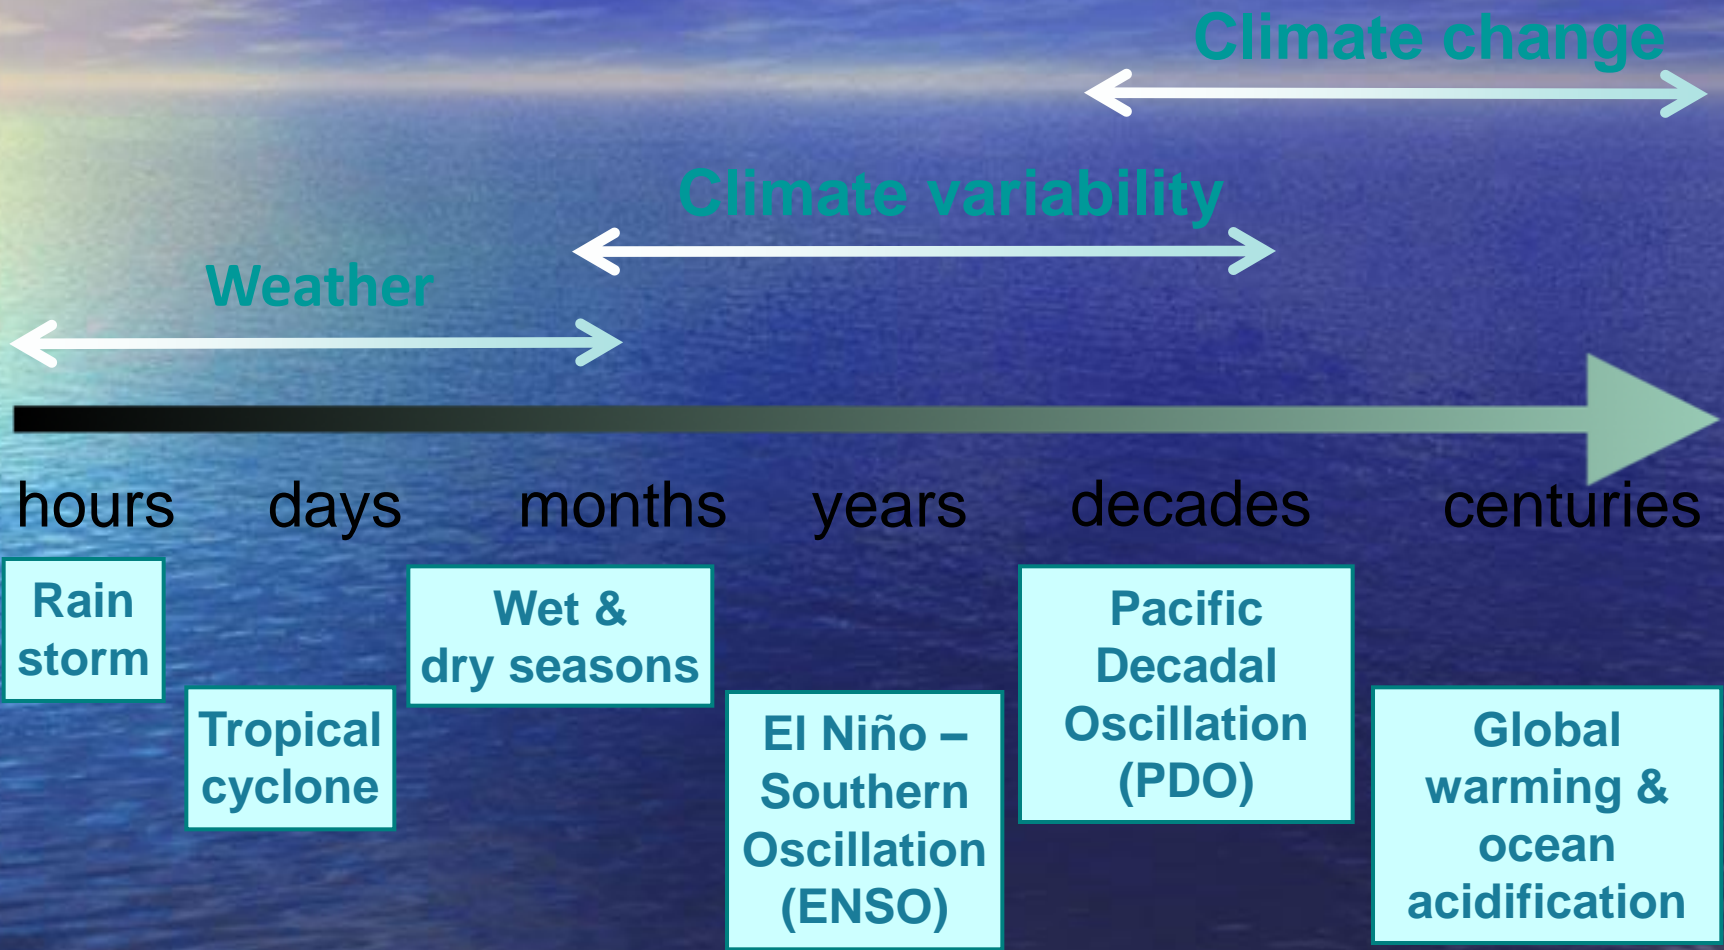

GLOBAL MEAN SEA SURFACE TEMPERATURE

PNG IS ALSO WARMING

VARIATION FROM NORMAL TEMP IN PNG SINCE 1945.

SEA LEVEL ANOMALIES THROUGH JUNE 2004 (m)

1992 1993 1994 1995 1996 1997 1998 1999 2000 2001 2002 2003 2004

Sea Level Rise/Changes =

TIDE LEVEL + WIND EFFECT +

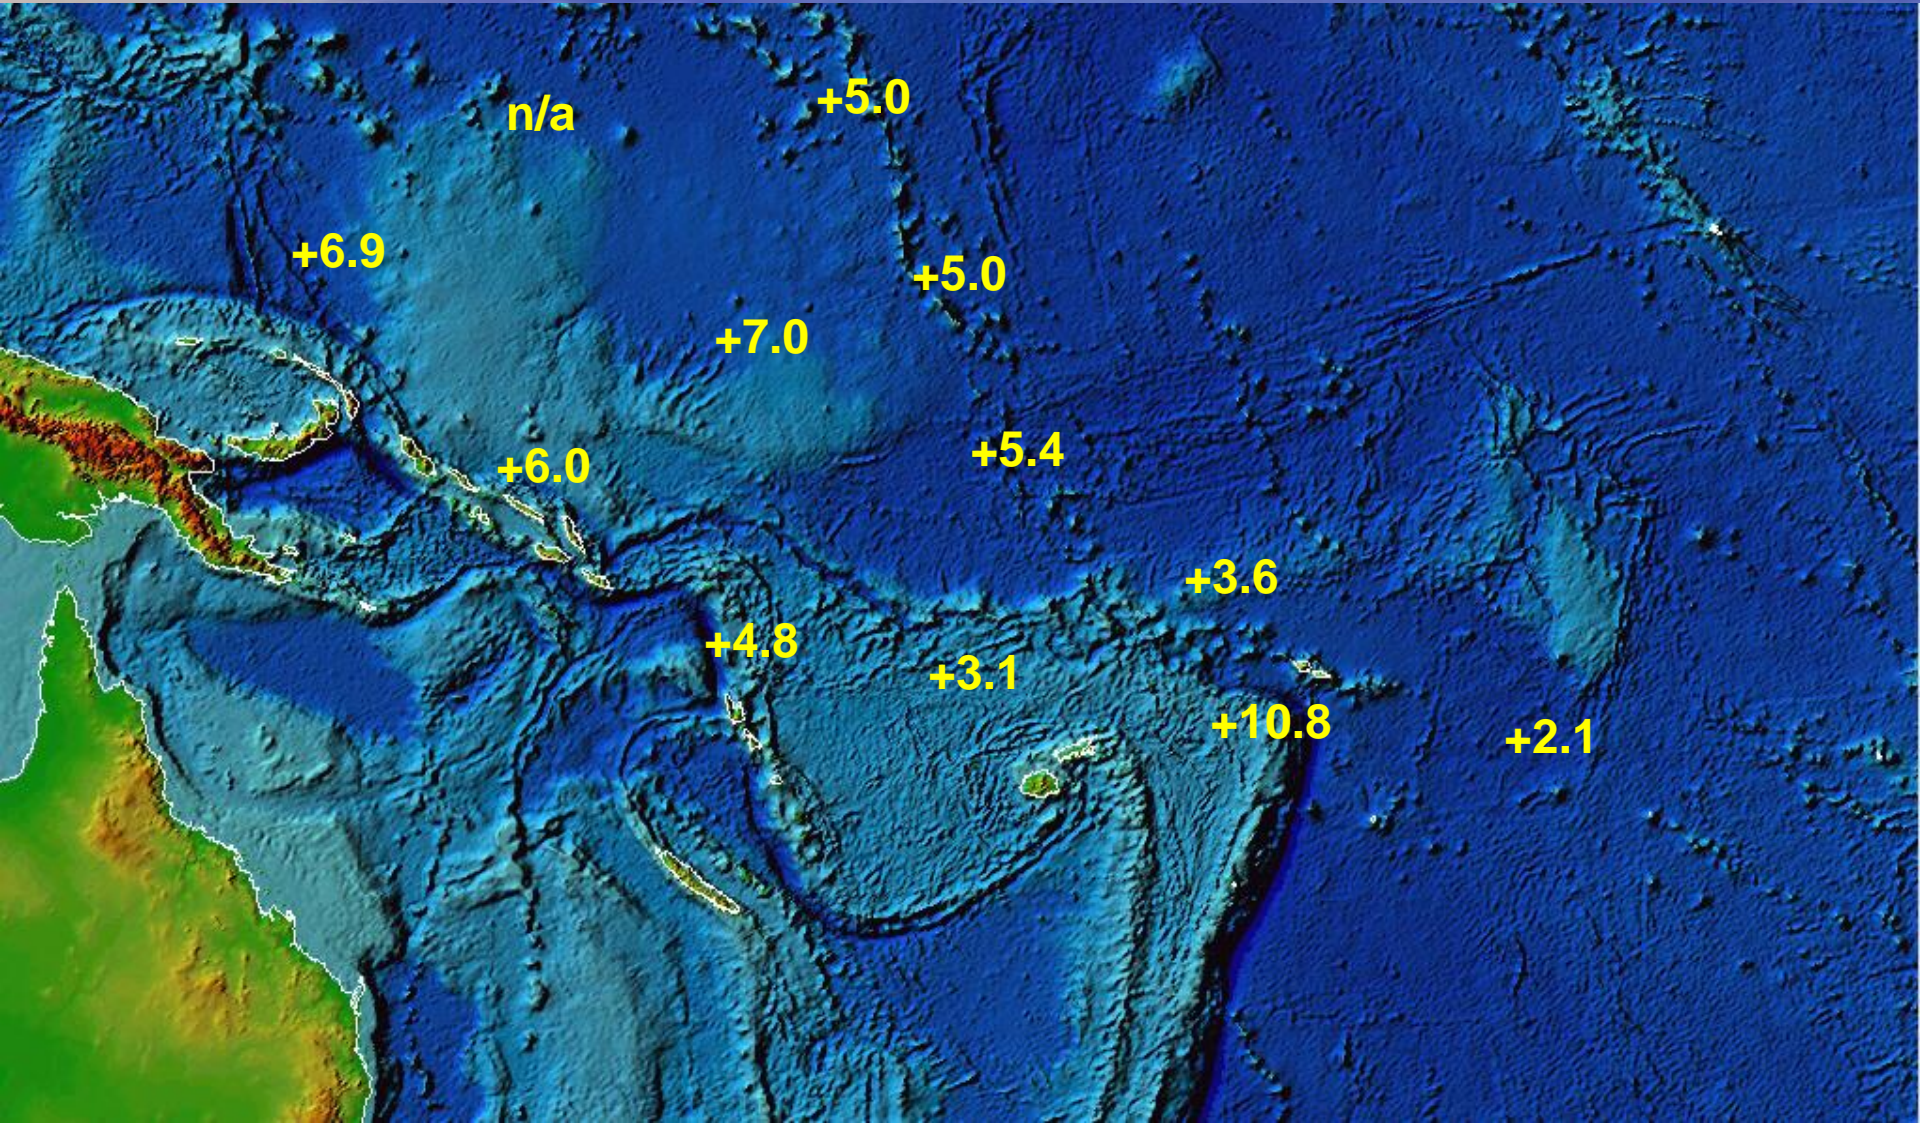

ATMOSPHERIC EFFECT + LAND

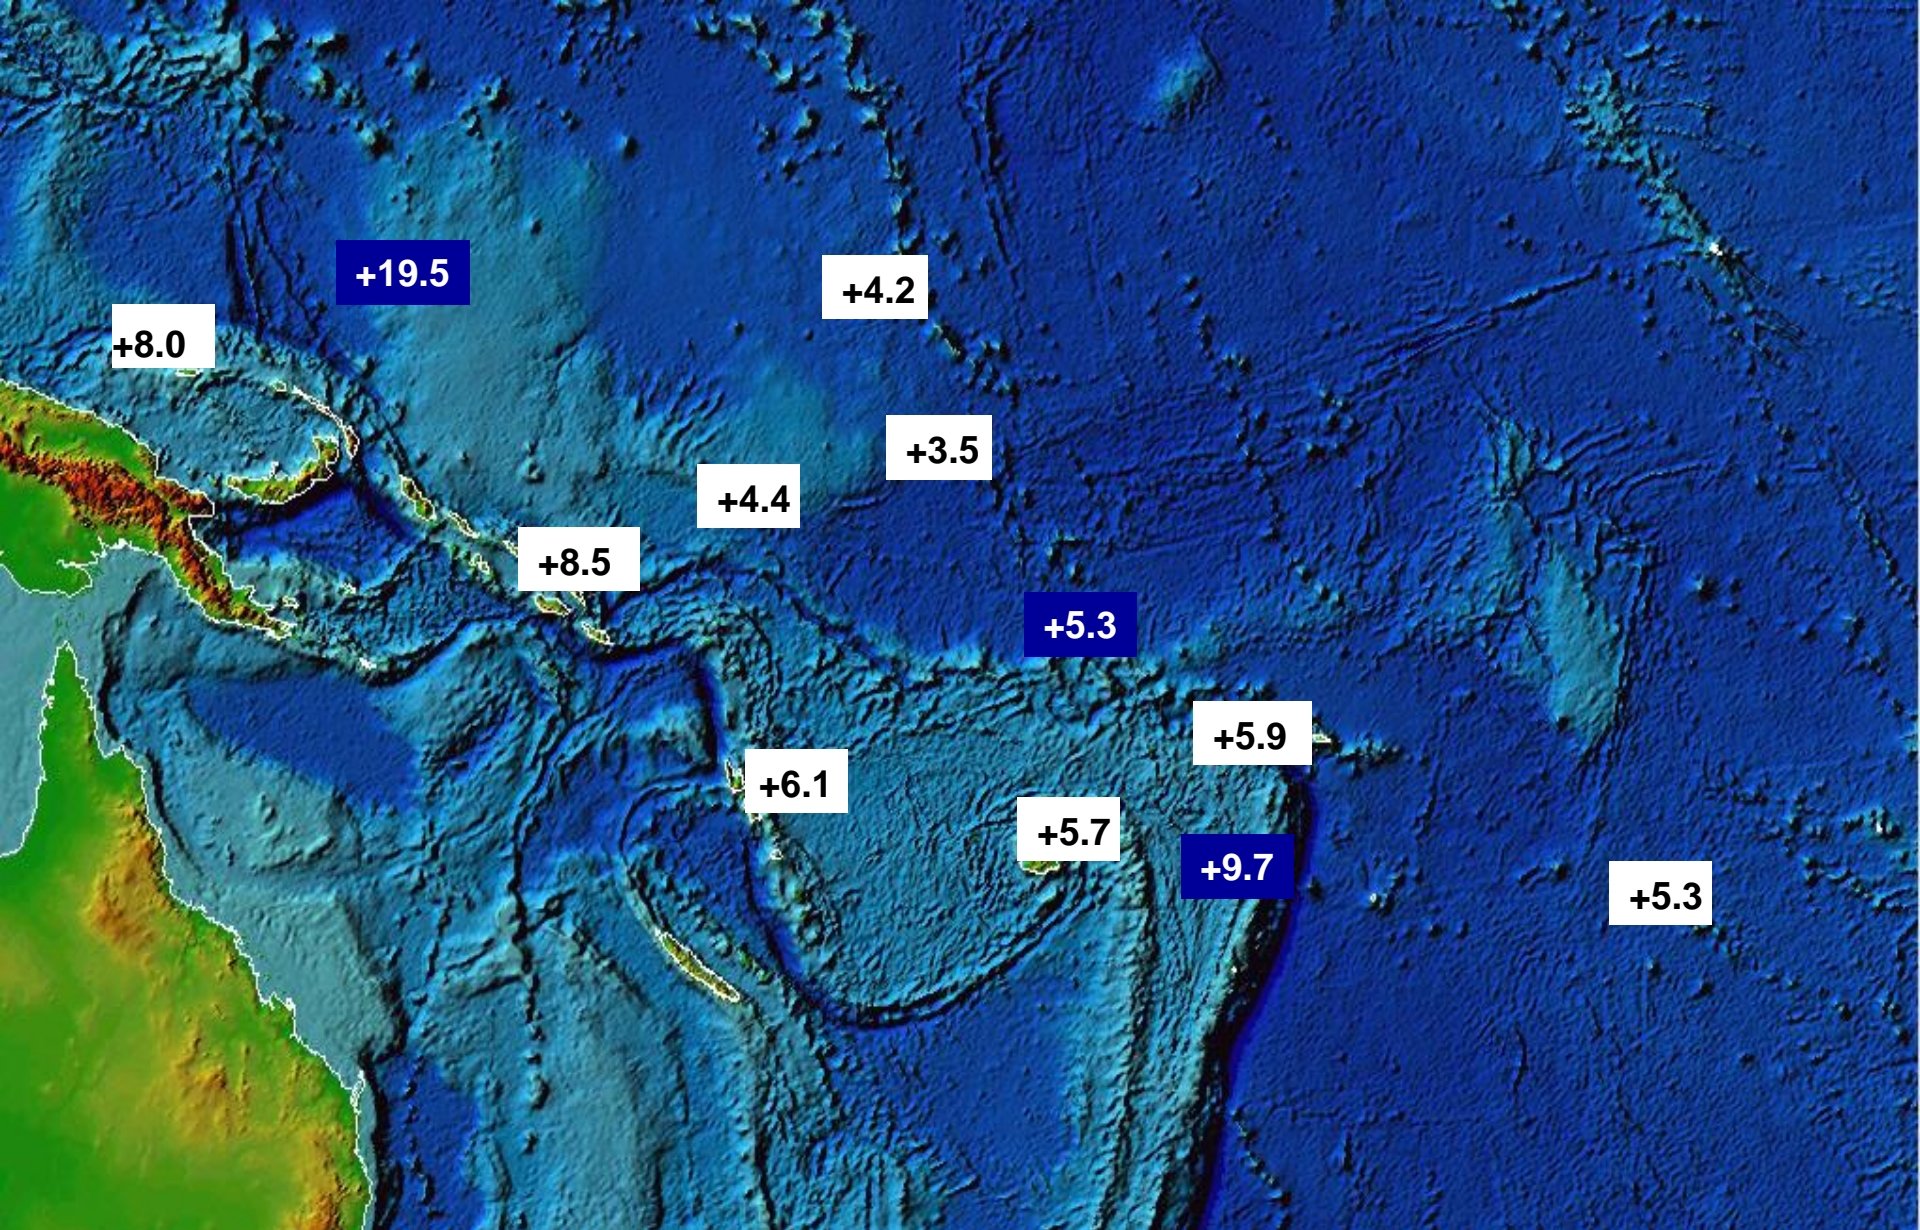

**MOVEMENT+ OCEANOGRAPHIC
EFFECT +**

GHG Signals[thermal expansion]

Results to end of June 2004

Net relative sea level rise (mm/year)

Rates of sea level rise (mm/year): August 2009

(e) Sea level rise (IPCC Third Assessment Report "Climate Change 2001: The Scientific Basis")

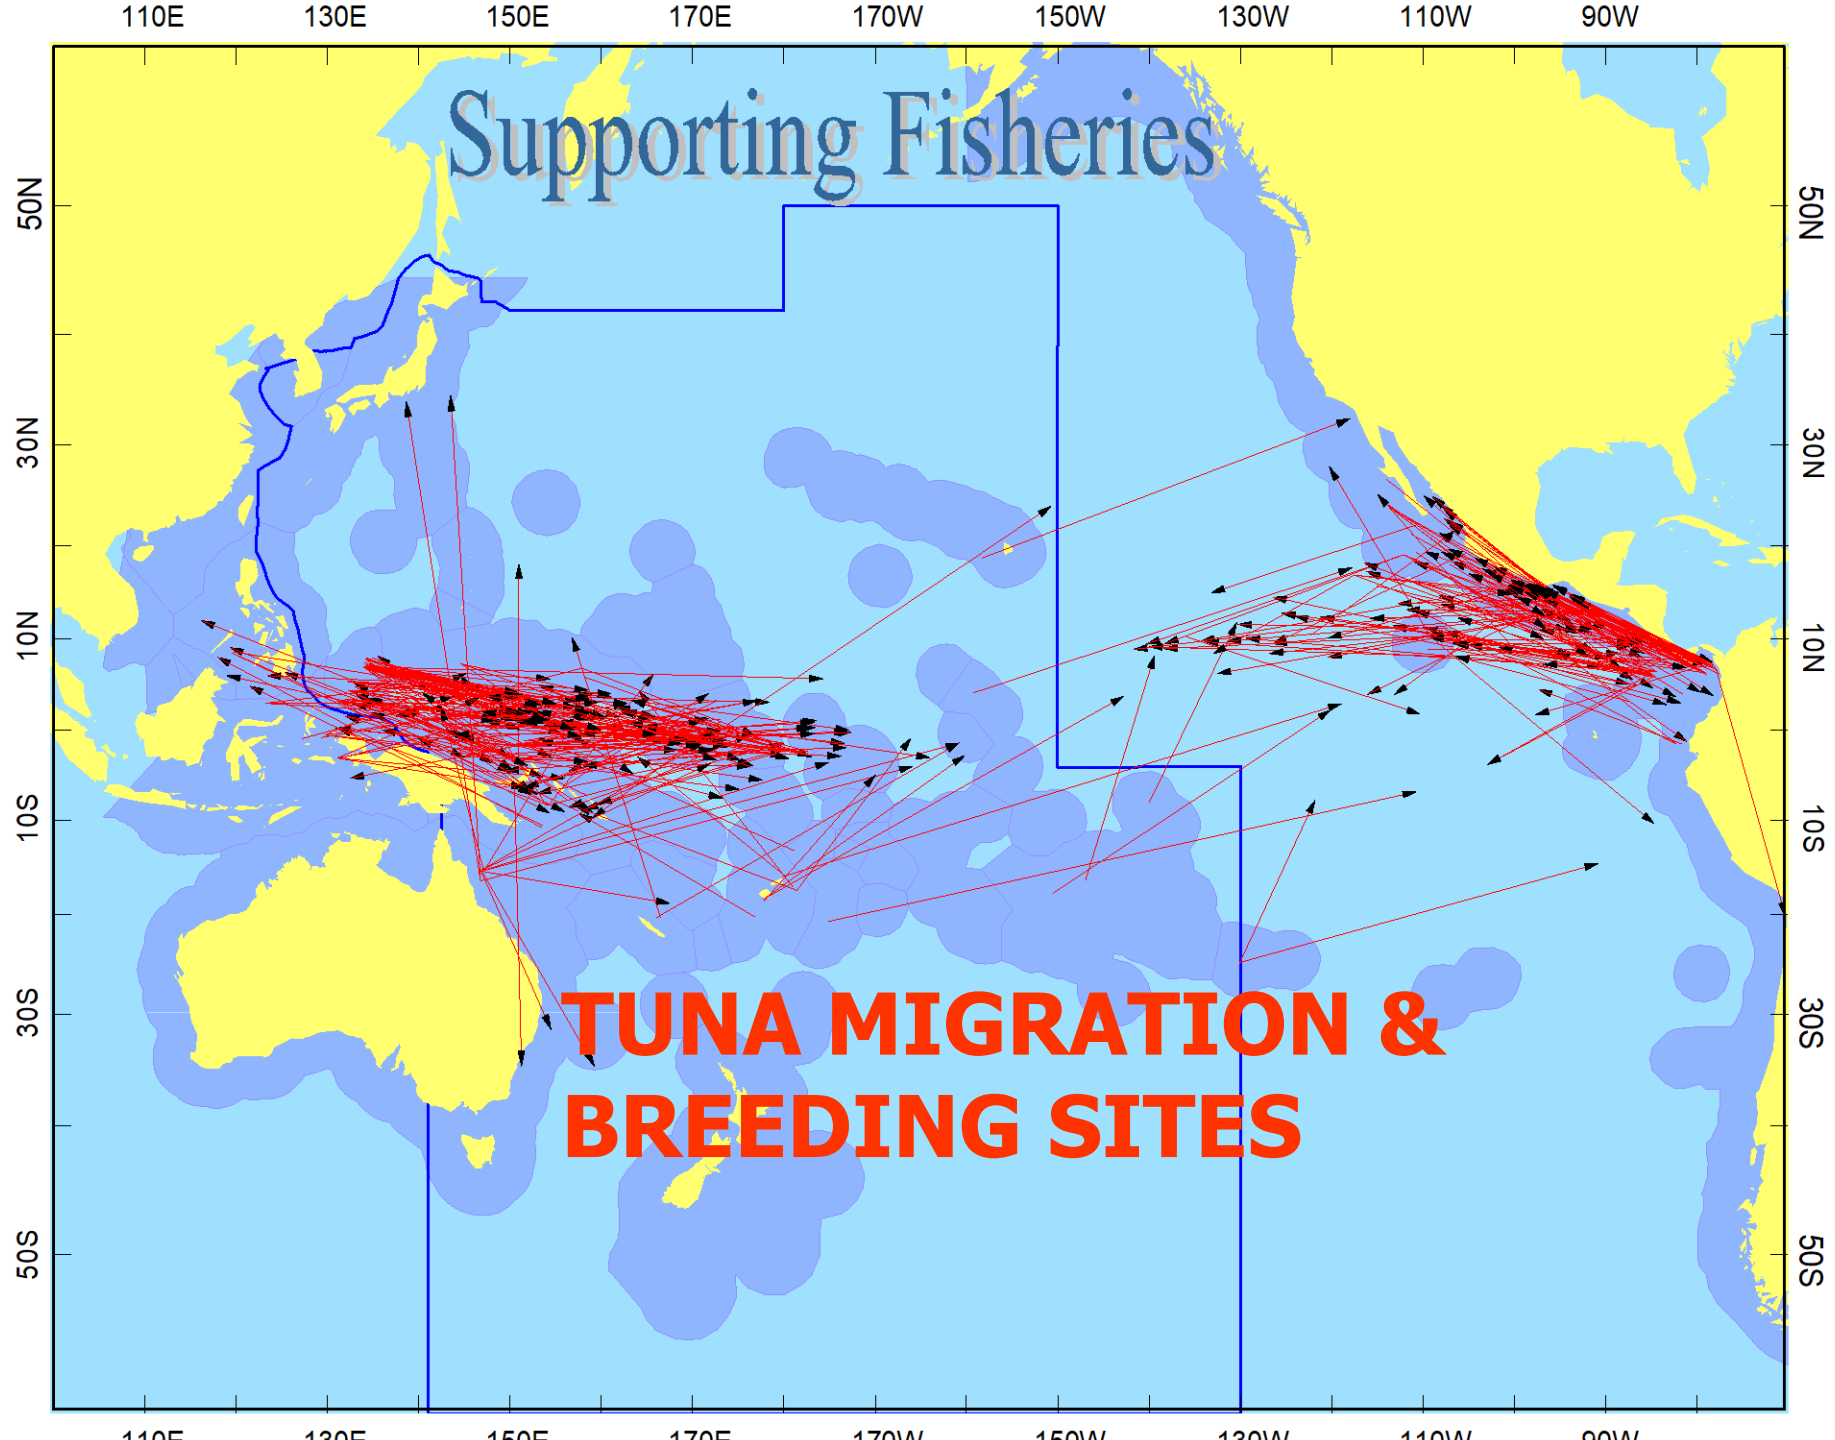

4TH IPCC-2007 Conclusions: Pacific Region

- Sea Level Rise: **2-9 mm/yr**
- Increase in air temp: **1.6-3.40C by 2100**
- Rainfall: mostly rise in the eastern and fall in the western Pacific - up to 20%
- Increase in **El Nino-like** Conditions
- Increase in Extreme Events

IMPACTS ON

- **Biodiversity**
- **People**
- **Water**
- **Fisheries**
- **Tourism**
- **Forestry & Agriculture**

•

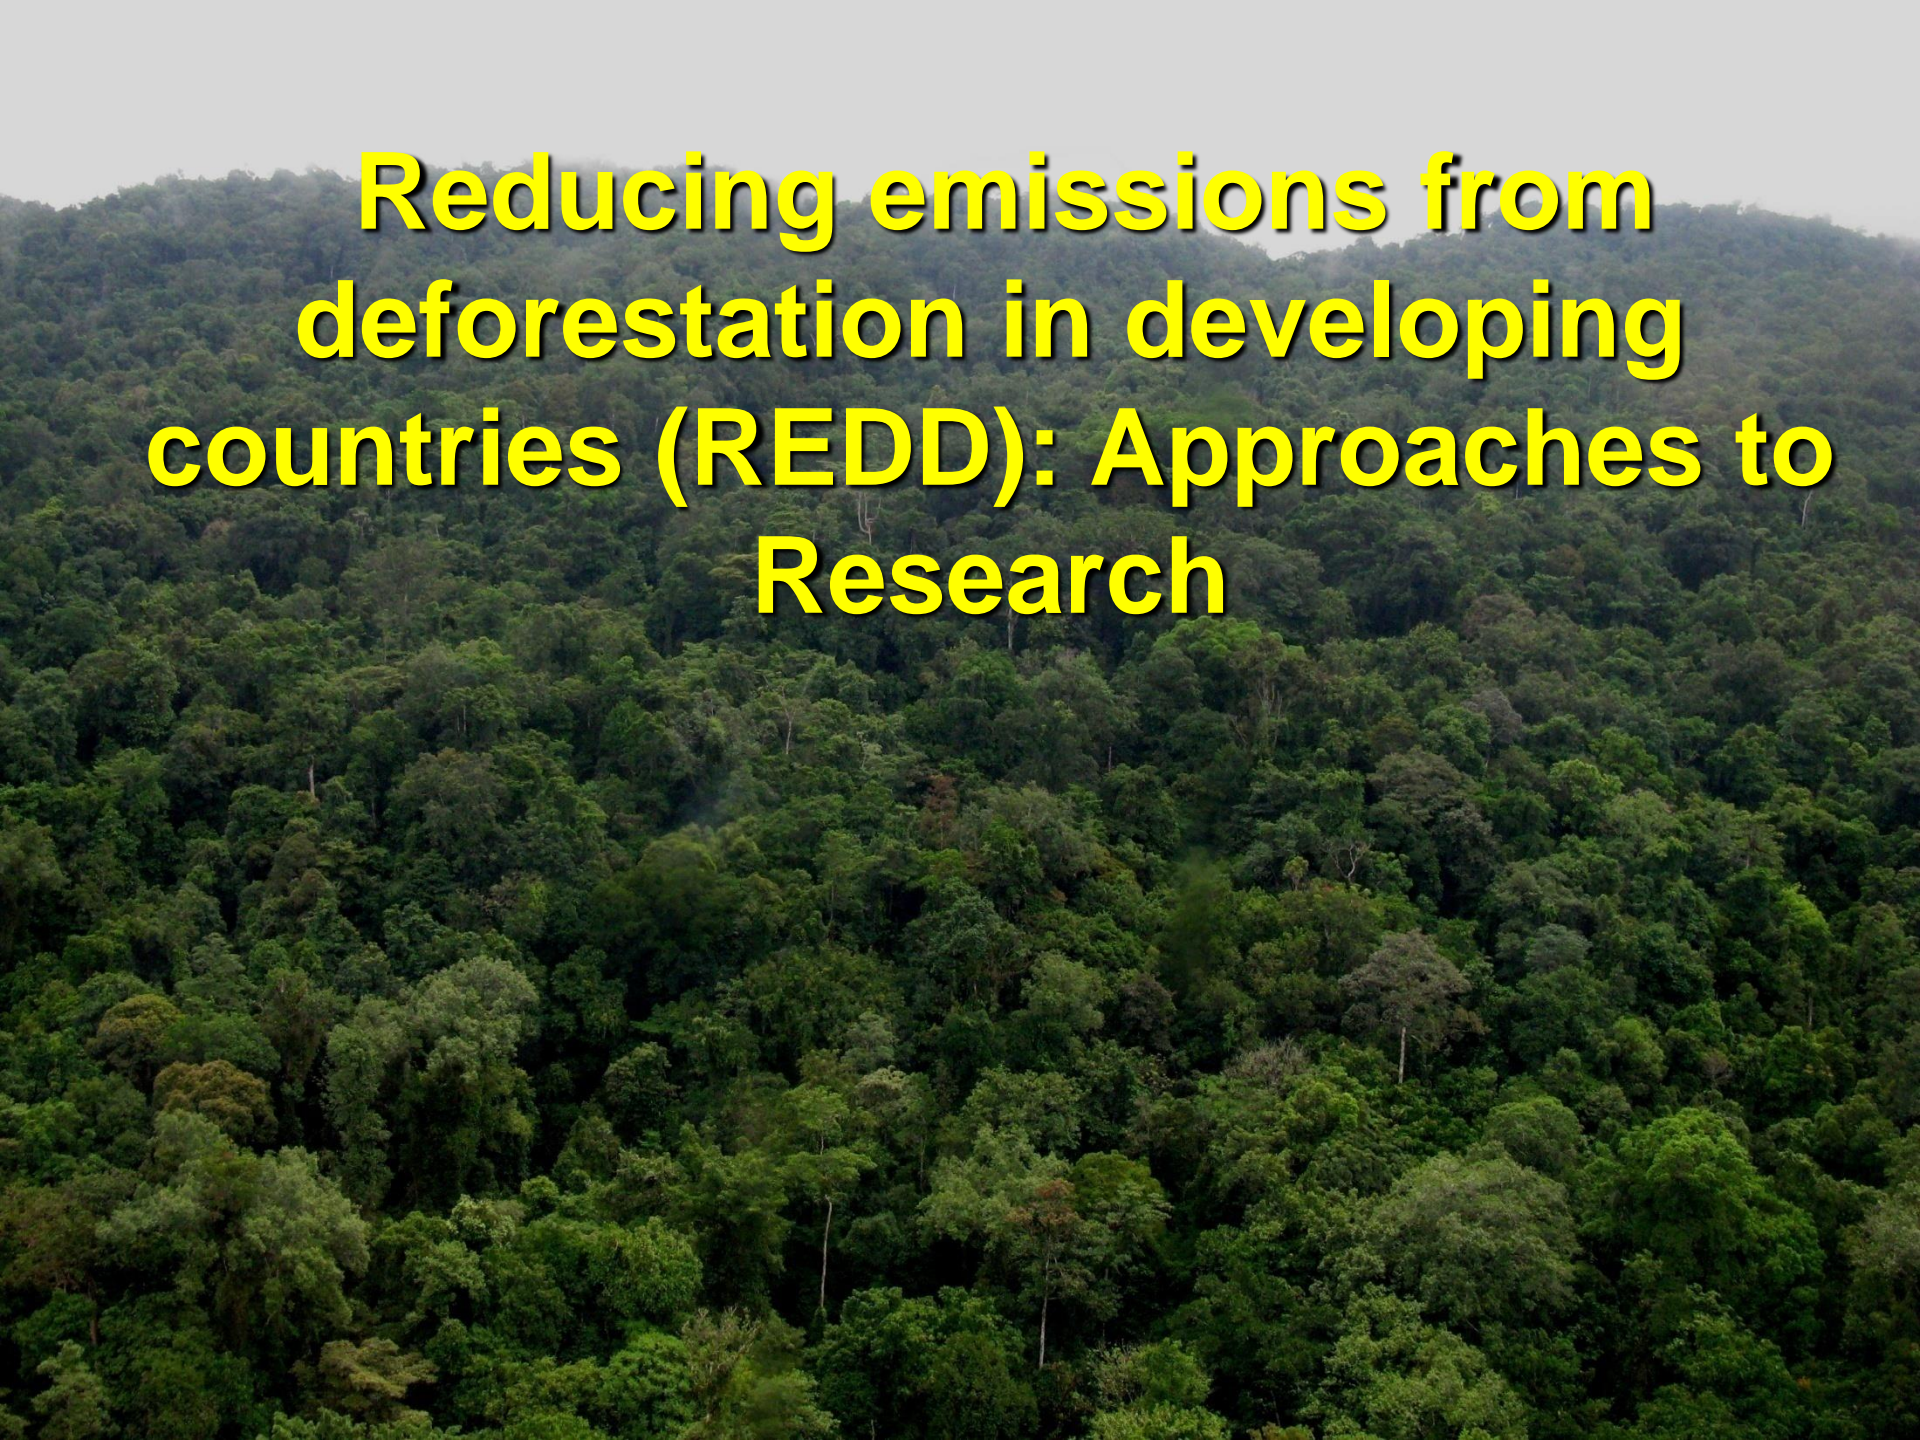

A wide, calm river flows through a dense mangrove forest. The water is dark and reflects the surrounding greenery and the overcast sky. The trees are thick and vibrant green, with some taller trees visible in the distance. The overall scene is serene and natural.

MANGROVES SPECIES & Economic Initiatives?

Loss of Biodiversity

An aerial photograph of a vast, dense tropical forest. The trees are a mix of various shades of green, from deep forest green to lighter, more vibrant greens, indicating a rich biodiversity. The forest extends to the horizon under a pale, overcast sky. The text is overlaid on the upper portion of the image.

Unique Island Biodiversity Protected

CROP RESEARCH FOR FORST IMPACTED AREAS IN Small Islands and HIGHLANDS REGION

**ENTIRE ISLAND BIODIVERSITY LOST DUE
TO CYCLONES AND STORM SURGES IN 2
DAYS**

**VULNERABILITY ASSESSMENT,
RESILIENCE SUSTAINABILITY
PROCESS**

Organisation of this Talk

- 1. Understanding vulnerabilities**
- 2. Enhancing resilience**
- 3. Acknowledging contexts**
- 4. Refining interventions**

Part 1. UNDERSTANDING VULNERABILITIES

- **Climate-change linked vulnerabilities are well known. They include –**
 - **Coastal livelihoods**
 - **Food production**
 - **Exposure to extremes**

Olosega Island, Samoa

Part 1. UNDERSTANDING VULNERABILITIES

- **Climate-change linked vulnerabilities are well known. They include –**
 - Coastal livelihoods
 - Food production
 - Exposure to extremes
- **Other vulnerabilities of island countries –**
 - Comparative smallness
 - Comparative isolation
 - Core-periphery disparities

Groundwater salinization kills coconut palms, Tebunginako, Abaiang Atoll, an outer island of Kiribati

Part 2. ENHANCING RESILIENCE

- **Inherent resilience of island countries is less widely appreciated. It includes –**
 - **Societal resilience**
 - **Cultural resolve**
 - **Coping traditions**

Men's house (*faluw*) built on a stone platform, Riy, Rumung Island, Yap, Federated States of Micronesia

Part 2. ENHANCING RESILIENCE

- Inherent resilience of island countries is less widely appreciated. It includes –
 - Societal resilience
 - Cultural resolve
 - Coping traditions
- Much indigenous resilience has been marginalised by the portrayal of Pacific Islands as vulnerable

Sign, South Tarawa, Kiribati

Part 3. ACKNOWLEDGING CONTEXTS

- Most attempts to raise awareness about climate change in the Pacific have failed, largely because –
 - Communication has been in (at least) a second language, encouraging climate change to be regarded as an alien concept
 - Communication (for communities) has been in inappropriate cultural contexts

Developing the *iTaukei* (Fijian) climate-change glossary

Part 3. ACKNOWLEDGING CONTEXTS

(continued)

- **Most attempts to develop sustained CCA in the Pacific Islands have failed, largely because -**
 - **External funds are used**
 - **Governments are expected by donors to use funds as they would**
 - **In-country capacity is insufficient**
 - **Communities are not properly engaged to sustain adaptation**

Collapsed seawall (and Japanese TV journalist), Yadua, Viti Levu Island, Fiji

Part 4. REFINING INTERVENTIONS

- Pacific Island people need external assistance to meet the challenges of climate change over the next few decades.
- Intervention strategies need to change to become effective and produce sustainable adaptation.

Living by the Marovo Lagoon,
Solomon Islands
(Photo: Edvard Hviding)

Part 4. REFINING INTERVENTIONS

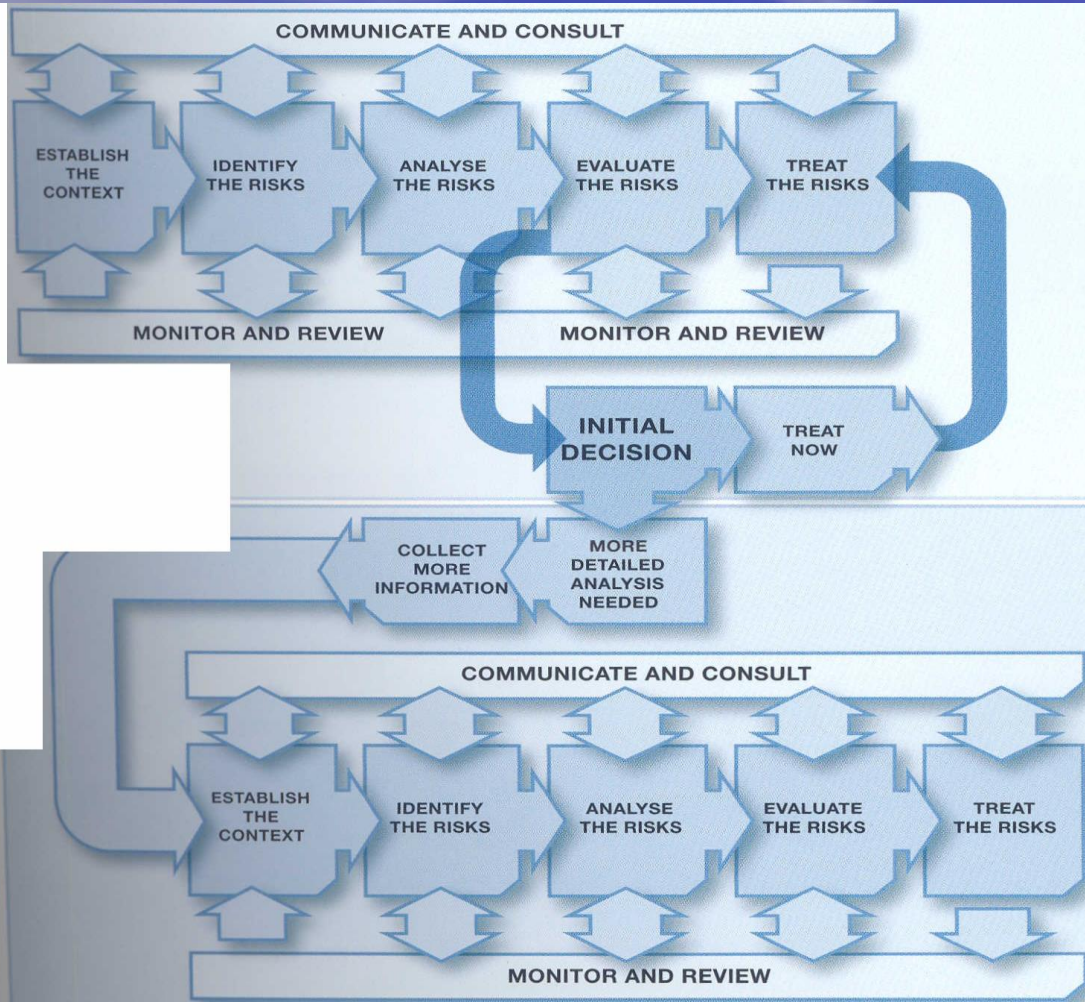

(continued)

- **Recommendations**
 - Governments should demonstrate 'ownership' of climate change by allocating internal revenue to adaptation
 - Community leaders should be engaged directly by intervention agencies
 - Climate change should be contextualised as a Pacific issue

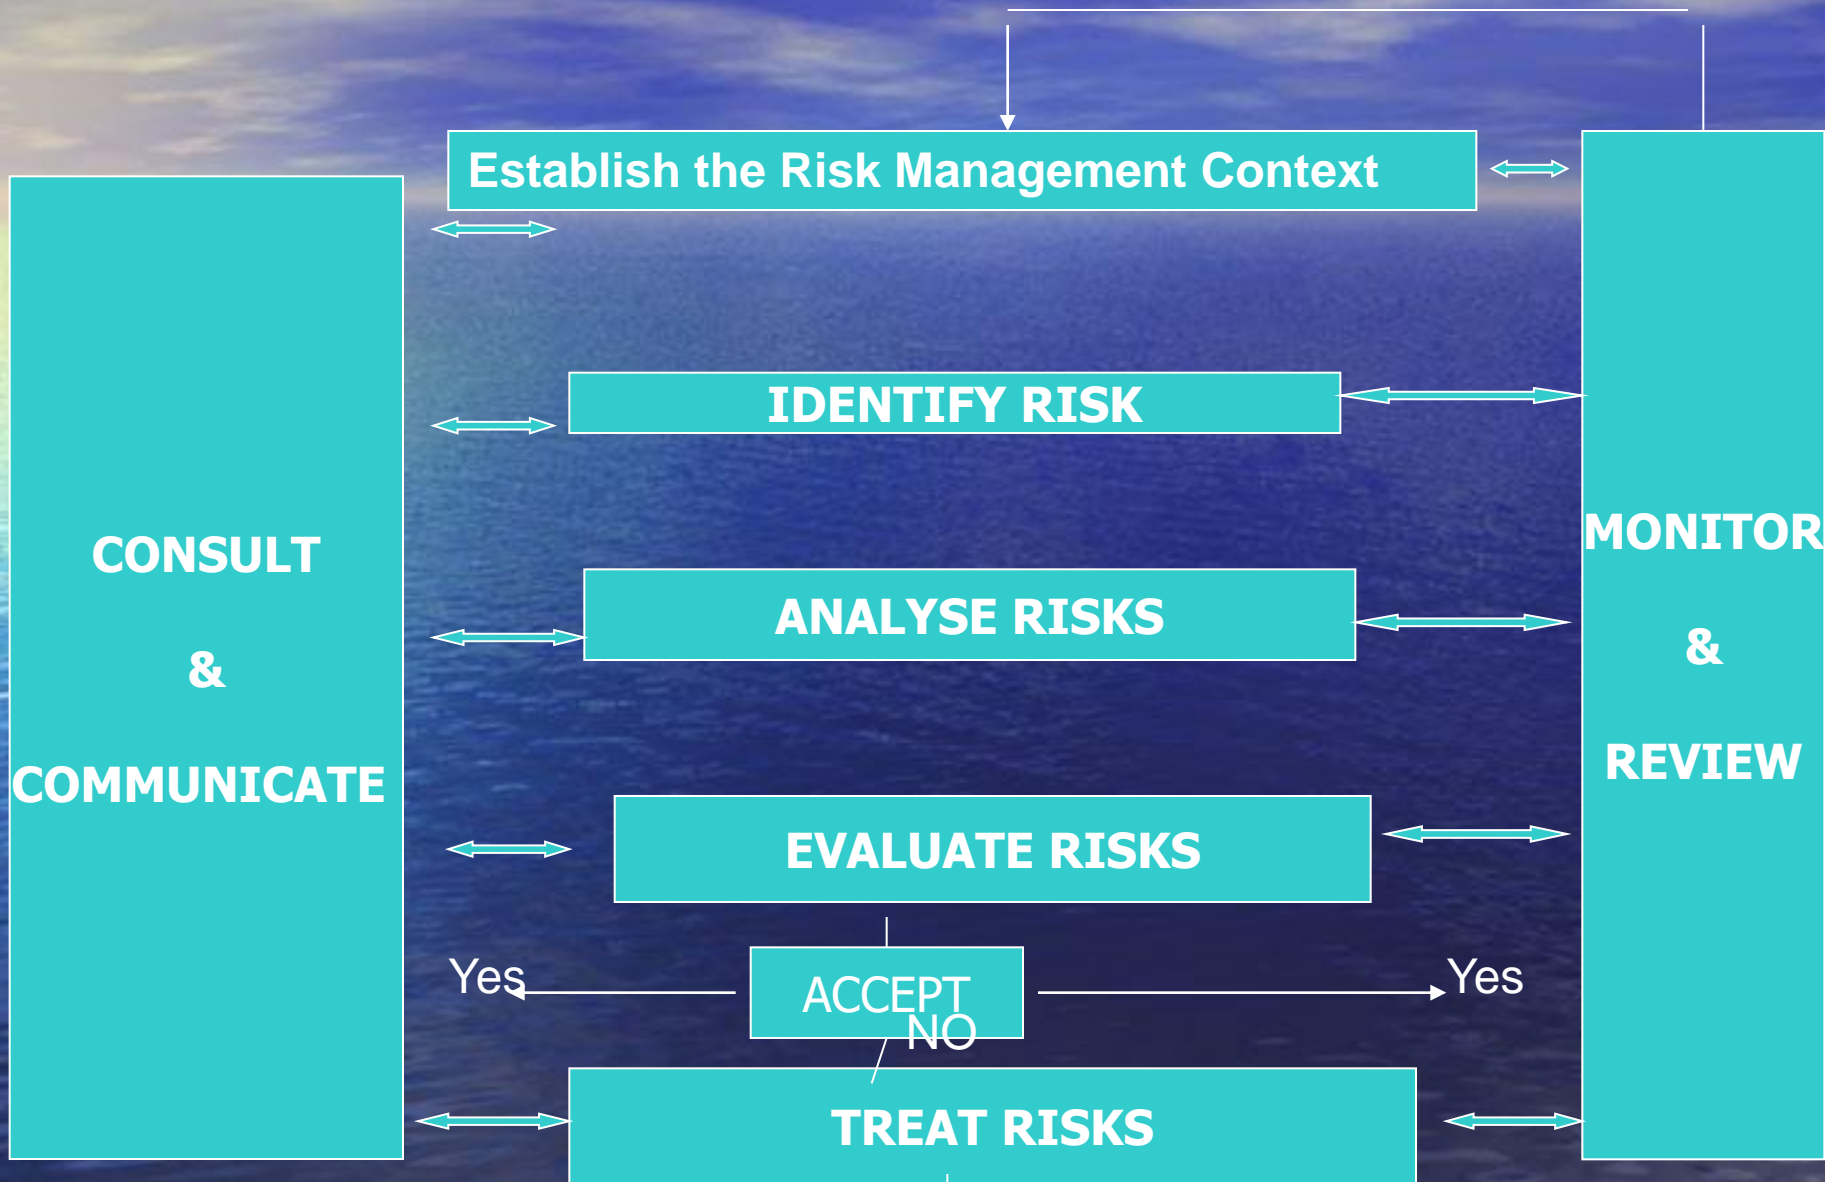

Option 1.

Comprehensive Hazard & Risk Management

CHARM – KEY PROCESS STEPS- Climate Change & Sea Level Rise

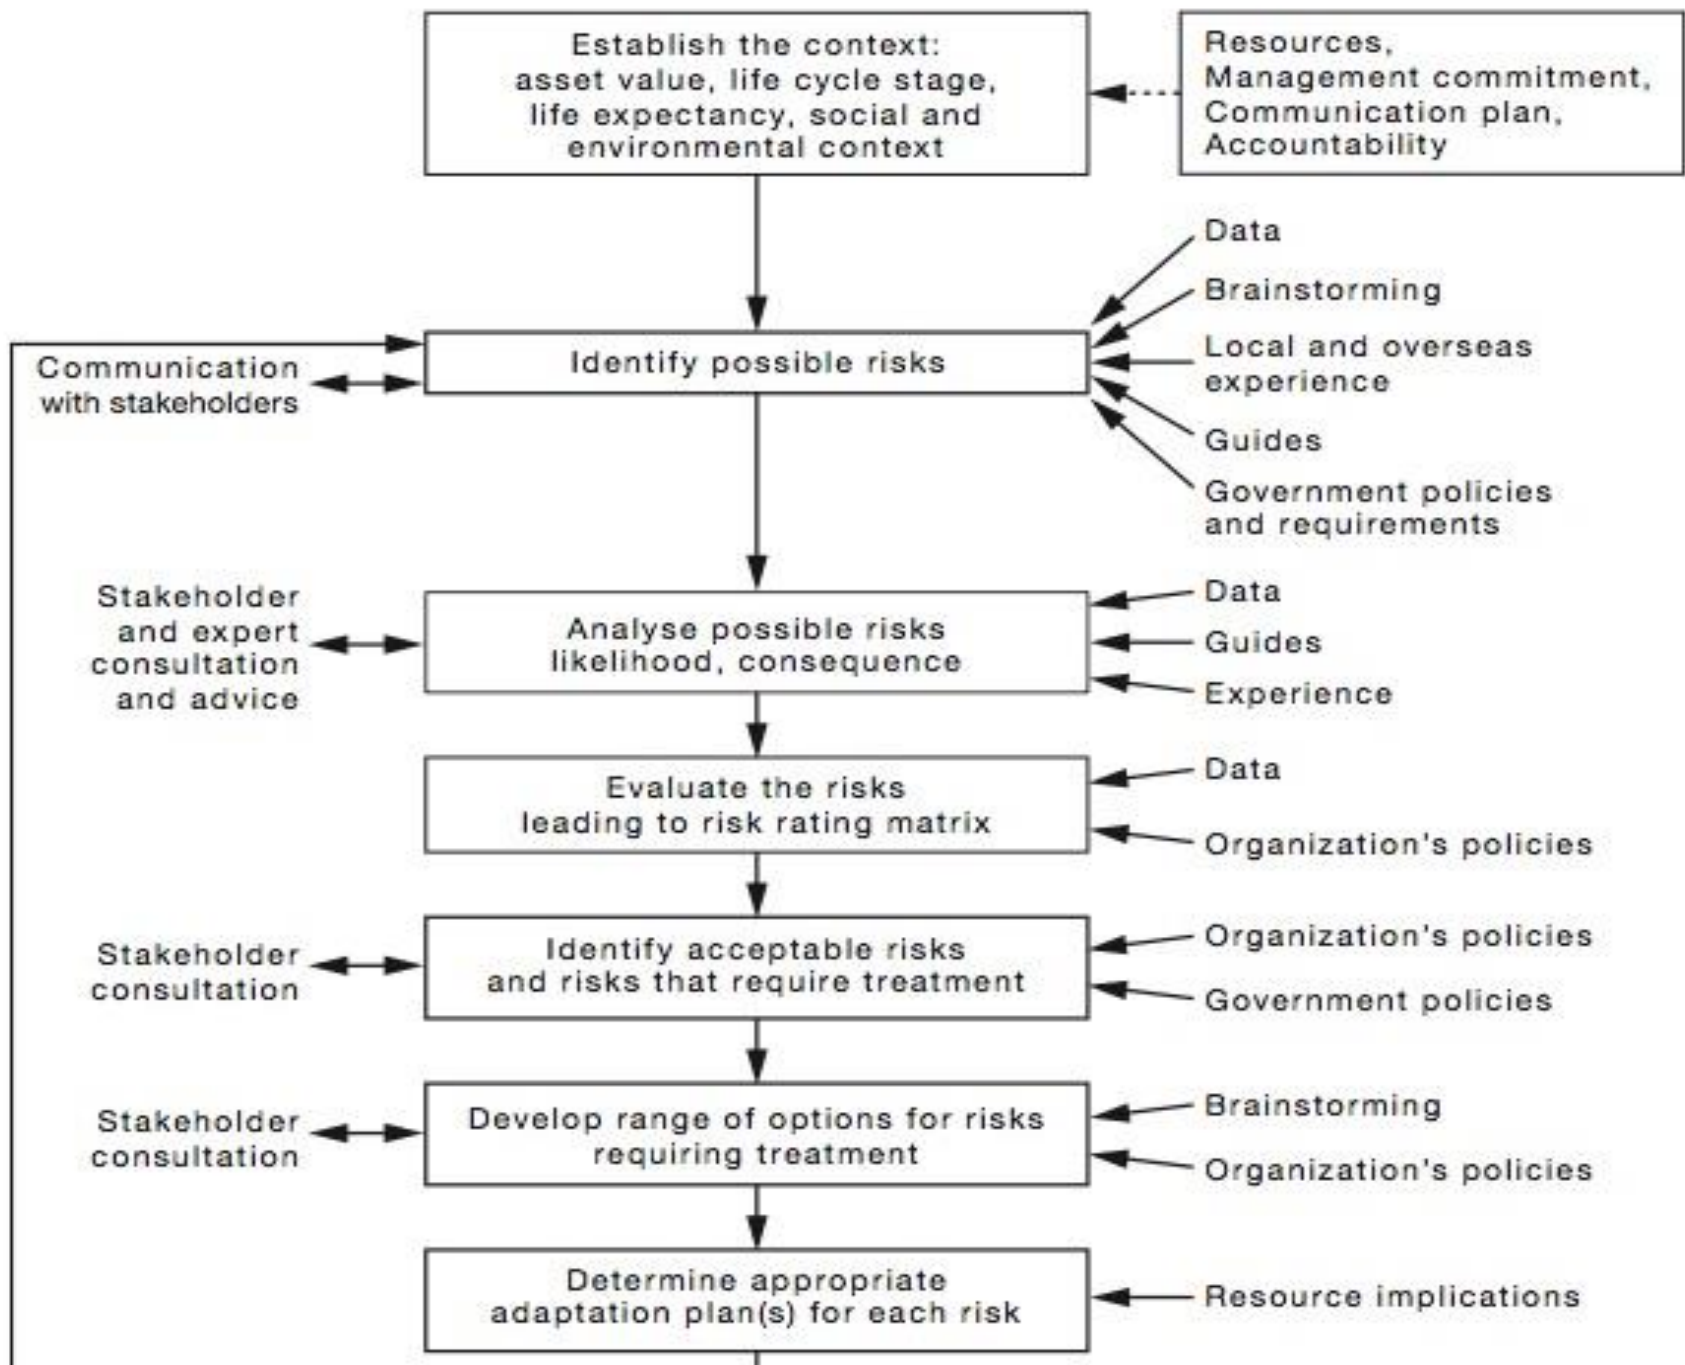

Option 2

**APPLYING RESILIENCE AND
SUSTAINABLE DEVELOPMENT**

A photograph showing a flooded residential area. In the foreground, two men are standing in knee-deep water. The man on the left is wearing a dark polo shirt and shorts, while the man on the right is wearing a green t-shirt. Behind them, a two-story house with a corrugated metal roof is partially submerged. A staircase leads from the ground level to the second floor. To the right, there are several large, green, spiky plants, possibly pandanus trees, with their roots exposed in the water. The background shows a body of water and a clear sky. The overall scene suggests a coastal area affected by flooding or sea-level rise.

LE MIGRATING & RESETTLEMENT??

RISK ASSESSMENT PROCESS

The Way forward

- Science evidence is critical in addressing the Impacts of Climate Change and Variability are REAL for the APEC AND SIDS REGION, start planning now.
- **Applying CHARM & Resilience and Sustainable Development**
- **Ensure government Policies are aligned to meet these new emerging issues as a "No Regrets Option".**

A tropical island with a white sandy beach and a cluster of palm trees, viewed from the water. The sky is blue with light clouds. The water in the foreground is clear and blue.
